w/ 2.25˝ or smaller roses only

HOW TO ORDER

WHAT YOU NEED:	PART # EXAMPLE	PAGE #
Knob or Lever – pair Minus Rose (.MR)	5000.150.MR	
Passage Rose* – pair (no suffix)	5002.150	
Knob Latch: For Pre-drilled Doors (or Lever Latch: For Pre-drilled Doors)	5510.150 + 6502.009 Adaptor (5513.150 + 6502.009 Adaptor)	50-51
Mortise Bolt	0418.150.LTP (Less Turn Piece)	55
Turn Piece	6750.150	56
Emergency Release Trim	0416.150	58

INSTALLATION

Mortise Bolt Installation

- When installing Mortise bolts, ALWAYS check width of Emergency Release Trim before drilling face bore. Standard bore is .625˝ (16mm) completely through door. Emergency Release Trim 0406 and 0407 require a .5˝ (13mm) bore on outside face of door; a .625˝ (16mm) bore on inside face of door.

IMPORTANT: When Emergency Release Trim is used, the turn piece spindle must be cut to extend no farther than halfway through the bolt.

Tubular Latch/Mortise Bolt Installation

- When installing Mortise bolts with tubular latches, ALWAYS ensure that face plates of both mechanisms have a minimum of .5˝ (13mm) clearance between face plates [2.75˝ (70mm) minimum distance between center of bolts] for proper strike installation. If mortise bolt and latch/face plates are installed against each other (as illustrated), use 5528 Strike illustrated above, and on page 50.

CAUTION: WHEN ROSES OF 2.625˝ DIAMETER ARE USED WITH THIS STRIKE, TURN PIECES NOS. 6728, 6732, 6733, 6734, 6751, and 6762 CANNOT BE USED DUE TO CLEARANCE RESTRICTIONS.

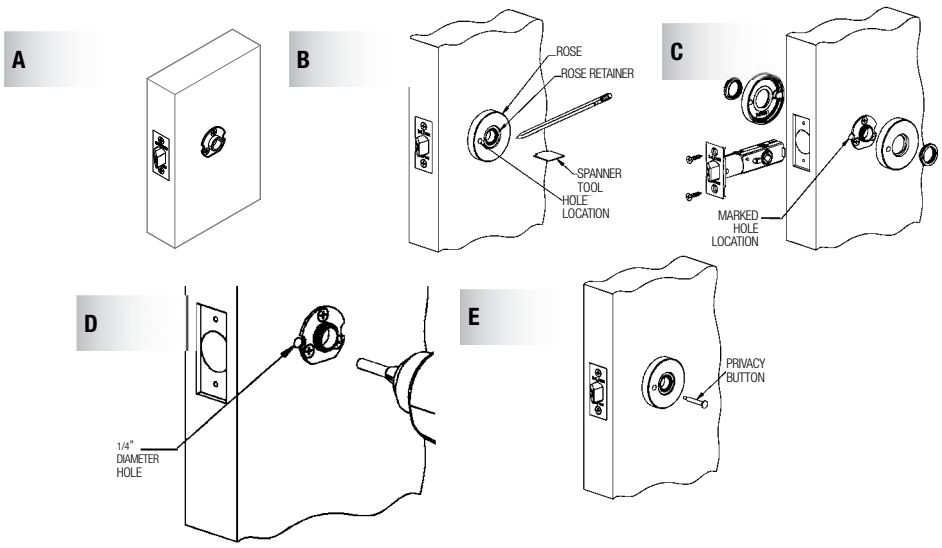

NOTE: 5528 strike is designed with a curved lip. Please specify hand of door when ordering. Hand of strike based on latch bolt being installed below the mortise bolt. Tubular latches and mortise bolts may be used in conjunction with escutcheons. Use of 5528 Strike is required to replace normally furnished strikes due to clearance restrictions.

***See Spindles Chart for length needed**

PRIVACY

2˝ Privacy Rose Installation

5097 Backplate

INSTALLATION

A. After completing the latch and backplate installation, a hole for the privacy button needs to be drilled.

The first step is to remove the alignment Bushings and spindle used for the backplate installation process.

B. Attach the roses to the backplates using the rose retainers and tighten with the supplied spanner tool.

Use a pencil to mark the privacy hole location on each side of the door.

C. To avoid damage, remove both roses and the latch before drilling the privacy holes.

D. Drill a 1/4" diameter hole through both sides of the door.

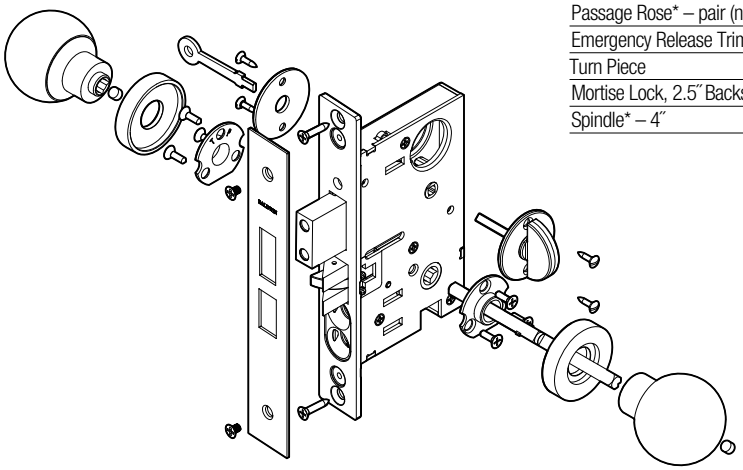

Caution: To assure proper hole location drill from each side of the door and not from one side only.

E. Re-install the latch and re-attach both roses.

On the inside of the room, thread the privacy button into the latch and install the knobs or levers.

NOTE: Installation is also valid for 1.75" privacy roses.

TUBULAR LATCH INSTALLATION W/ALIGNING BUSHING

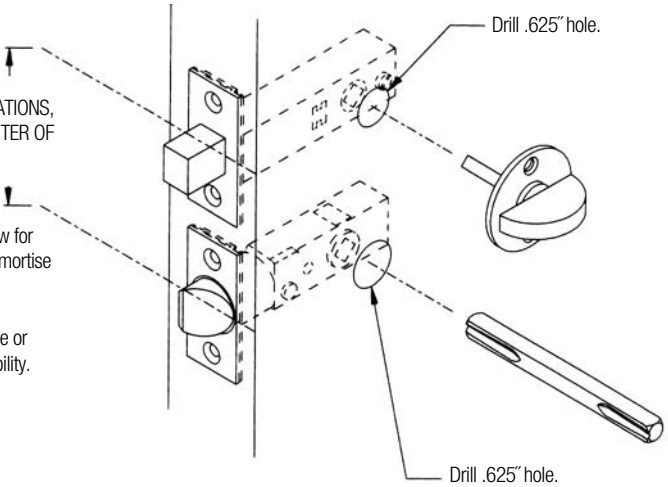

*NOTE: IN SEPARATE MOUNTING APPLICATIONS, THE MINIMUM DISTANCE BETWEEN CENTER OF BOLTS IS 2.75″.

Alignment Bushing

5097.009.N
Back Plate

Use of 8474.000 Aligning Bushing will facilitate installation of trim.
Trim must be in alignment with latch and spindle to prevent binding.

A. Install latch and strike per template instructions.
B. Insert spindle through latch.
C. Position 5097.009 Back Plates over spindle and insert 8474.000 Alignment Bushings.
D. Center mark and install screws into back plates and remove 8474.000 Alignment Bushings.

MORTISE BOLT INSTALLATION

When installing mortise bolts, ALWAYS check width of Emergency Release Trim before drilling face bore. Standard bore is .625″ (16mm) completely through door. Emergency Release Trim 0406 and 0407 require a .5″ (13mm) bore on outside face of door; a .625″ (16mm) bore on inside face of door.

IMPORTANT: When Emergency Release Trim is used, the turn piece spindle must be cut to extend no farther than halfway through the bolt.

- **Communicating Door Kit:** For use in conjunction with Baldwin patio deadbolt
  Includes: swivel spindle, rose and screw cover for oppsite side of Communicating Door
- Function: Security between (hotel) rooms with limited space between doors
- Communicating door side compatible with any LARGE thread-on rose style (5048 rose included)
- Immediate availability in standard Estate finishes

Commonly found between two hotel rooms where a functional latch is still required, and limited space between doors does not allow for trim to be installed on exterior sides.

Security between rooms is accomplished with a standard patio dead bolt. Latch & trim offer normal passage functionality on interior, while completing the aesthetic requirement of a complete trim set on the door.

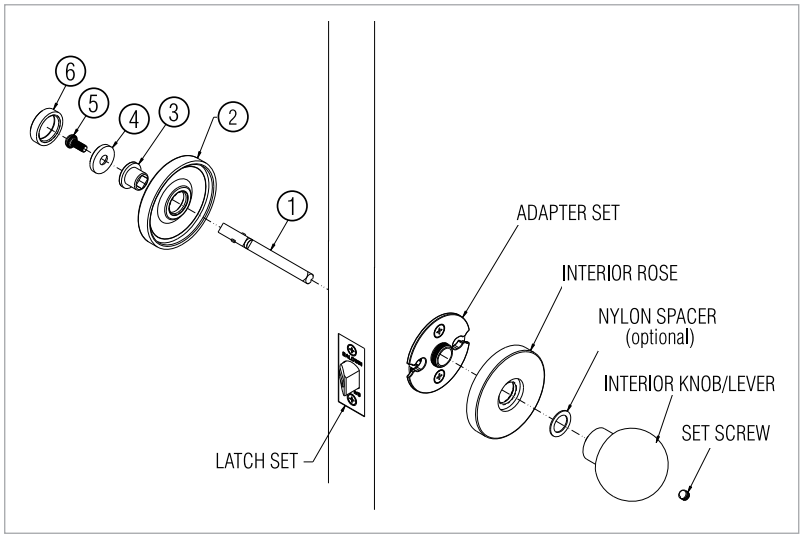

Door kits include components needed to complete communicating door installation:

>Estate 5048 thread-on passage rose and 0129 screw cover

>Components 1 – 6 shown below

>Kits designed to work with standard communicating door thickness of 1.75”

>6502.009 adaptor, latch, knob/lever are not included in kit.

RIM LOCKS AND CREMONE BOLTS

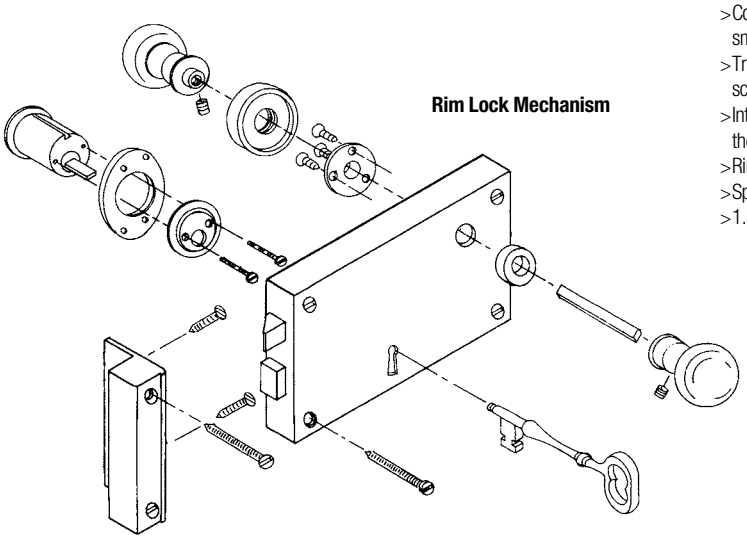

STANDARDS & SPECIFICATIONS

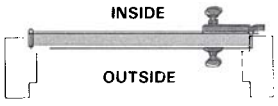

Standards & Specifications

Pride in our American Heritage and renewed interest in its early history has greatly influenced U.S. architecture. With careful research and design, Baldwin has authentically reproduced a piece of that heritage – colonial rim locks.

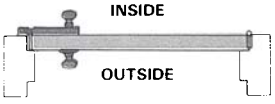

- >Constructed with solid forged brass parts for exceptional durability and smooth operation
- >Trim designs secured to a broached spindle with an epoxy (resin) coated set screw – prohibits screw from loosening
- >Interior rim locks use bit keys. Bit keys may be ordered fixed permanently into the lock by ordering as .RBIT or .LBIT configurations
- >Rim locks are sold as sets with 5030 knob included
- >Split finish requests are subject to 5% list price adder
- >1.375 minimum door thickness is required

MORTISE HINGE SPECIFICATIONS

FEATURES: Extruded brass, full mortise hinges are machined for precise installation and smooth movement. Knuckles are milled to a clearance of 0.010˝ (.25mm) to minimize vertical wear. Each hinge is beveled on the inside leaf to obtain a tight fit when viewing the hinge in a closed position, and furnished with stainless steel, rust-proof pins for added durability.

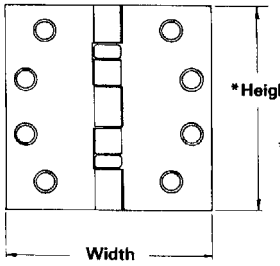

PIN DESIGN: Each pin is manufactured from precision ground Type 302, stainless steel material to prevent corrosion. The pin "floats" within the barrel of the hinge, yet is held in a stationary position. Pins can be removed by unthreading each finial and tapping the pin upward from the bottom of the barrel.

FINIAL DESIGN: Hinge finials are specially designed to thread into the top and bottom of the hinge barrel, preventing the pin from rising out of the hinge barrel. All tips are completely interchangeable to facilitate stocking and eliminate excessive inventories. Finials can be purchased separately in sets of four only. Hinges are furnished standard with button design finials.

FASTENERS: All full mortise hinges are supplied standard with appropriate size wood screws as noted on chart. Wood screws are fully threaded to the head and have an undercut head for secure installations.

BEVELED EDGE: Each Baldwin hinge is beveled on the inside leaf to obtain a tight fit when the hinge is in a closed position.

EXTRUSION: Hinges manufactured from solid brass extrusions have two inherent properties: exceptional strength and precision tolerances. Baldwin's extruded hinges are machined from a solid brass bar to exact tolerances to ensure an even wear between each knuckle. The result is a QUALITY hinge which can withstand above average door weights and stresses with maximum vertical and lateral wear performance.

***Height of hinge is always first dimension not including tip.**

TEMPLATE: All full mortise hinges illustrated within this section are designed in accordance with the most current specifications established by the American National Standards Institute (ANSI).

APPLICATION: Baldwin full mortise hinges are classified as STANDARD WEIGHT for installation on doors up to 1.75˝ (44mm) in thickness.

NUMBER OF HINGES: Use three hinges on doors up to and including 7.5 feet (2.3m) and one additional hinge for each additional 2.5 feet (.76m) or fraction thereof.

NON-REMOVABLE PINS (NRP): Hinges can be obtained with non-removable pins to prevent removal of hinge pins when the door is in a closed position. This special application is used when the hinge barrel is exposed to the exterior side of a building (Reverse Bevel Door Conditions). A stainless steel set screw is inserted into the barrel from the inside of the hinge (Emblem Mark Side), which intercepts a groove milled on the pin. (Not available on Hinge No. 1030). Furnished at an additional charge. Specify as follows: 1 pr 1040.030 NRP Hinge - 4˝ x 4˝ = 1040.030.NRP

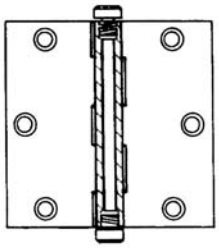

METAL DOOR APPLICATION: Machine screw packets are available to accommodate mortise hinge installation for metal doors.

- >All hinges have a slight offset leaf which provides clearance of .077˝ (2mm) when leaves are closed and parallel.
- >All hinges have template screw hole locations for use on either wood or hollow metal doors and frames.
- >Pins are manufactured from precision ground, stainless steel material.
- >All finials are threaded into the barrel of the hinge to prevent pin from rising.
- >Finials are completely interchangeable with all full mortise hinge sizes.
- >Furnished standard with solid brass Phillips head wood screws, undercut, fully threaded to the head.
- >Inner leaf is beveled to ensure the tightest possible fit and enhance hinge appearance.
- >Available with a Non-Removable Pin (NRP) feature (except No. 1030).

BALL BEARING HINGE SPECIFICATIONS

Each hinge is designed with two anti-friction ball bearing assemblies which are non-detachable. The balls inside each chamber are constructed from through-hardened, chrome alloy steel material to ensure a longer hinge life. The bearing races are machined from alloy steel which is then hardened and electroplated with a rust-resisting zinc-chromate finish. Our testing indicates that although this electroplate finish provides rust protection, when exposed to weather elements of exterior, the steel will eventually rust. The location of each assembly increases the vertical load capacity and greatly reduces both vertical and lateral wear of the hinge. As a result, all factors which normally contribute to hinge failure are significantly reduced. BALL BEARING HINGES ARE RECOMMENDED FOR DOORS EQUIPPED WITH DOOR CLOSERS AND/OR RECEIVING AVERAGE FREQUENCY SERVICE.

APPLICATION: STANDARD WEIGHT BALL BEARING hinges are designed for medium weight doors receiving average traffic in residential and light commercial construction. Ball bearing hinges are ALWAYS recommended for doors equipped with door closers.
